

Profile

Embedded Engineer with 3 years of experience developing production-grade C/C++ software for microcontrollers and Linux environments. Demonstrated success in leading teams, mentoring interns, and managing complex firmware projects from design to deployment. In my spare time I enjoy spending my time skiing in the Rocky Mountains and experimenting with generative AI. Based in Calgary, Canada, and seeking opportunities locally, nationally, and internationally.

Education

Bachelor of Science in Computer Science – University of Calgary

May 2018 – May 2022

GPA: 3.49/4.00

Work Experience

Firmware Engineer – Simply Embedded

Jan 2021 – May 2024

- **Firmware Development:** Engineered robust RTOS C/C++ firmware solutions on 32-bit ARM microcontrollers. Conducted thorough unit testing and collaborated closely with the QA team to ensure high-quality firmware releases.
- **Peripheral Driver Development:** Developed and maintained drivers for peripherals (audio, display, touch, modem, secure element, IMU) within a FreeRTOS environment, ensuring seamless hardware-software integration.
- **Advanced Debugging Techniques:** Utilized logic analyzers, oscilloscopes, and emulation tools like QEMU to debug and validate driver quality. Implemented debug control with JLink and GDB server, successfully flashing and debugging firmware.
- **Mentorship and Hiring:** Led the interview and selection process for five engineering interns, providing hands-on training in firmware development and debugging to ensure they quickly became productive team members.
- **Network Security:** Utilized TCP/IP stack and security protocols to manage secure communications, including certificate management. Developed OTA firmware updates as a key feature, ensuring reliable deployments over HTTPS.
- **Client Engagement:** Excelled in client interactions, from cold conversations at tradeshow (CES 23/24) to in-depth meetings during international trips. Experienced in converting customer business needs to concrete development objectives.

Retail Sales Staff – Camper's Village

May 2014 – July 2021

- **Customer Engagement:** Expert in high service sales, engaging with customers to understand their requirements and recommend the best camping and hiking products in response.

Other Experience

President – Computer Science Undergraduate Society

Sept 2020 – Feb 2021

- **Led Calgary Hacks 2021:** Coordinated a remote-first event with over 700 participants, awarding \$15,000 in prize money.
- **Team Leadership:** Directed a team of 20 executives and volunteers to ensure smooth event operations.
- **Stakeholder Communication:** Facilitated regular meetings with the Faculty of Science and the Department of Computer Science.
- **Sponsorship Management:** Developed sponsorship packages, managed sales from initial meetings to final payments, and maintained a CRM.

Project in Theoretical Computer Science – NSERC Undergraduate Student Research Award

Sept 2021 – Apr 2022

- **Mathematical Research:** Studied computational number theory under Dr. Michael J. Jacobson, using algorithms and computational methods to explore Aliquot sequences, contributing to the understanding of their statistical properties and behaviors.
- **High-Performance Compute:** Developed scalable and parallel algorithms in C and OpenMP, effectively leveraging an 800GB RAM, 80-thread research cluster to optimize the computation of Aliquot sequences.
- **Comprehensive Documentation:** Produced a thorough undergraduate thesis and Doxygen-generated code documentation, providing a clear foundation for future research on Aliquot sequences. Aliquot Sequence Project

Skills

Programming Languages	Skills	Tools
C, C++, ARMv8 Assembly	Firmware Development, Hardware Debugging	Jlink, GDB, STM32Cube, MCUXpresso
Python, Bash, Makefile, CMake	Linux Programming, Cloud computing	Logic Analyzers, Oscilloscopes, QEMU
Java, Javascript, HTML, CSS	Web development, Public speaking	Git, Jenkins, GitHub
